

Product Information

Series 5400 Sand Cutting Tool

General

The TTS Series 5400 Sand Cutting Tool is a hydraulically operated, spinning internal tubing cutting tool. It is designed to be deployed on coiled tubing and sever or cut a variety of tubing strings. Once the tool is deployed to the desired depth in the well on coiled tubing, a fluid pump system is activated and pumping of a sand laden slurry is injected through the coiled tubing and out the Cutting Tool. The Cutting Tool spins while cutting the tubing string from inside to outside.

Application

- ♦ Cutting of tubing when coiled tubing deployment is desired over wireline
