## Workover / Completion Systems

### TTS Thru-Tubing Gas Lift / Velocity String Installation

(Utilizing the TTS Retrievable Thru-Tubing Packer System)

#### Features/Benefits

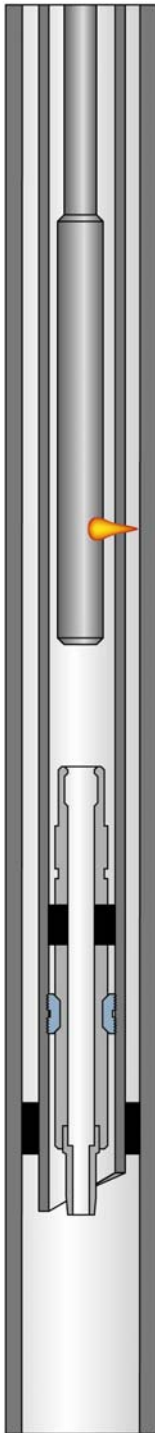

- ♦ Designed for applications when desirable to deepen the Gas Lift injection point without pulling the production tubing, *allowing for Gas Lift repair or installation using coil tubing and/or wireline without the expense of a rig.*
- ♦ Live well operations can easily be tolerated, *eliminating the need and expense of well killing programs.*
- ♦ Each packer can be tested along with all connections of coil tubing as they are run, *allowing for removal and replacement prior to attempting to flow the well.*
